# PCEFIS™ by PCFlightSystems™

\*Requires use of a GPS with a destination waypoint selected.

\*\*Indicated Airspeed and Altitude provided when optional airdata interface is used, otherwise the "tapes" display GPS groundspeed and GPS Altitude when a GPS is connected.

Select/Deselect "HITS" mode by pressing the iPAQ "top hat" switch in the center. When in HITS mode, "top hat" switch controls autopilot target altitude and heading. When not in HITS mode, "top hat" switch is used to control pitch reference "zero" setting. This allows pitch "zero" to be adjusted manually for different aircraft trim conditions.
